Cleaning of 25/96-well plates

1. Rinse wells with ddH2O several times by pipetting ddH2O into each well. Pipette up and down for each well, then shake water out by inverting the plate upside-down.
2. Repeat 3-4 times.
3. Pipette 100 EtOH into each well and allow to sit for 5 minutes.
4. Shake out EtOH by inverting the plate upside-down and shaking.
5. Pipette 70% EtOH into each well, and allow to sit for 10 min.
6. Shake out EtOH by inverting the plate upside-down and shaking.
7. Under a sterile hood, rinse wells with ddH2O, shake out water and allow to air dry.
